

## NAME

`mrcrop-linrange` – crop Oracle extended SQL trace files by line number range

## SYNOPSIS

```
mrcrop [ options ] linrange [ --end-line=number ] [ --help | -? ] [
--license ] [ --man ] [ --start-line=number ] [ --version ] [ file ... ]
```

## DESCRIPTION

`mrcrop linrange` creates a single output file for each input file, with performance data (PARSE, BINDS, EXEC, FETCH, CLOSE, WAIT, etc. lines) taken only from the line number range specified by the command line options. Supplemental data, such as file preamble information, relevant cursor definitions, and relevant execution plans may, of course, be taken from anywhere within the input file.

## OPTIONS

**--end-line=*number*** Do not include performance data after line *number* in the output file. The default value is **--end-line=0**, which means to include data through the end of the input file.

**--help, -?** Print usage information and exit.

**--license** Print license key information and exit.

**--man** Print the manual page and exit.

**--start-line=*number*** Do not include performance data before line *number* in the output file. The default value is **--start-line=1**, which means to include data beginning on line 1.

**--version** Print the version number and exit.

## EXIT STATUS

Exit status is 0 for success, 1 for failure.

## AUTHORS

Jeff Holt
